Rapid Prototyping Practice using Object Oriented Programming (RPPOOP)

Project Name: Attendance using Face Recognition System.

Week 4 progress: Working more on linking of Flask App.

Goals Achieved:

- Integrating of multiple webpages with flask and OpenCV which will allow for creating a multi-page (home_page, attendance_page, newuser_page, qrpage) web application where each page has different functionality.
- Creation of new webpage with QR option.
- Integrating Flask with google forms and also with excel to get location of user.
- Customized google form code to get access of Geolocation.
- Beginning to create a report of project in latex.

Goals to be achieved:

- Will learn to link CSV with database SQL.
- Will learn to link CSV with google form to get location of user.
- Will enhance the website by using CSS.
